

Arduino uno Project

Component	Description	Price	Photo
Soil Moisture Sensor Module	Soil moisture sensors measure the volumetric water content in soil	60-150	
Temperature & Humidity Sensor (DHT11) sensor	DHT11 is a Humidity and Temperature Sensor, which generates calibrated digital output. DHT11 can be interface with any microcontroller like Arduino, Raspberry Pi, etc. ... This module makes is easy to connect the DHT11 sensor to an Arduino or microcontroller as includes the pull up resistor required to use the sensor.	25-80	
LDR Light Sensor Module	Light sensors are electronic devices that indicate the intensity of daylight or artificial light. They convert light energy to an electrical signal output .	30-80	
Arduino uno	Arduino is an open-source electronics platform based on easy-to-use hardware and software. Arduino boards are able to read inputs - light on a sensor, a finger on a button, or a Twitter message - and turn it into an output - activating a motor, turning on an LED, publishing something online.	300-600	
Jumper Wire	Connect to bread board and sensors.	20-50	
Breadboard	The purpose of the breadboard is to make quick electrical connections between components- like resistors, LEDs, capacitors, etc	50-60	

MQ-2 Smoke Combustible Gas Sensor Detector Module	The MQ series of gas sensors use a small heater inside with an electro-chemical sensor. They are sensitive for a range of gasses and are used indoors at room temperature	200-300	
2channel relay module	2-Channel 5V Relay Module is a relay interface board, it can be controlled directly by a wide range of microcontrollers such as Arduino, AVR, PIC, ARM and so on. It uses a low level triggered control signal (3.3-5VDC) to control the relay. Triggering the relay operates the normally open or normally closed contacts.	110-200	
Pump And Light		80-200
